

The background features a dark blue gradient with a pattern of lighter blue hexagons and lines on the left side, creating a technical or data-oriented aesthetic.

# IBM DATA ANALYST CAPSTONE PROJECT

Analysis on Emerging Technology Skills and Trends

[illegible]

## Appendix

# EXECUTIVE SUMMARY

---

- Data contextualization and analysis
- Methodology description
  - Data gathering from IBM site
  - Data analysis by python and MySQL
  - Data visualizations using IBM Cognos
- Results supported with graphs and trends
- Discussion of overall finding and implications regarding the results
- Final conclusions of the study was carried out

# INTRODUCTION

---

- The presentation report uses data analytics to highlight current project trends in need for skills related to programming language, databases and web frames.
- The following were investigated using the data provided
  - Programming languages currently in demand
  - Database skills in demand
  - Popular IDEs or WebFrames currently in demand and in future
- Target audience for this research are IT professionals, HR managers and anyone interested in IT sector.

# METHODOLOGY

---

- Collect survey data and understand the data
  - Web scrapping, APIs, request libraries
- Data wrangling
- Exploratory Data Analysis (EDA)
  - Analyze data distribution
  - Handling outliers
  - Correlations
- Data visualization
  - Highlight distribution of data, relationships and comparison of data
- Creation of dashboards

# RESULTS

# PROGRAMMING LANGUAGE TRENDS

## CURRENT YEAR

Top 10 Languages worked with

## NEXT YEAR

Top 5 Desired Languages to learn

# Programming Languages Trends – Findings and Implications

## Findings

- Javascript, HTML, SQL, Shell languages and Python are the most used languages currently.
- Javascript, HTML, SQL, Python and Typescript will be the most used languages in future years.
- Python will have more demand than SQL in next years

## Implications

- Javascript and HTML are used for web development which means that web development skill has the highest demand.
- Python is gaining more traction due to increase in demand for AI and ML skills
- SQL is the most relevant language for data professionals.

# DATABASE TRENDS

## CURRENT YEAR

Top 10 Databases worked with

## NEXT YEAR

Top 5 desired Databases to Learn

# Database – Findings and Implications

## Findings

- MySQL, Microsoft SQL server, PostgreSQL, SQLite and MongoDB are the top 5 most used databases at the moment.
- Redis and Elasticsearch are relatively new tools and are set to gain more traction in the new IT space.
- PostgreSQL remain at the top of list in both currently used and future trend databases.

## Implications

- PostgreSQL is the most desired database to learn next year, even though it ranks second in current usage. This might indicate a growing preference for open-source relational databases that offer versatility and scalability.
- Companies still prefer open source databases.
- Despite its current lower usage, the strong interest in learning Elasticsearch suggests a growing trend toward full-text search engines and analytics tools in modern applications.

# DISCUSSION

## Overall findings and implications

### Findings

- Most people in the IT profession have a bachelor's degree.
- Web development languages are the most popular and on-demand tools in the IT field currently.
- The tech sector is majorly filled with young people under 40 years of age.

### Implications

- It is important for data professionals to develop proficiencies in NoSQL in addition to SQL databases.
- Web development is still a very lucrative skill.
- Less developed countries need more access to tech trainings and education.

# CONCLUSION

It is expedient to stay updated in the tech sector as the trends keep changing over time..

# APPENDIX

*#Plot a histogram of ConvertedComp*

```
QUERY1 = """  
SELECT ConvertedComp  
FROM master  
"""  
df = pd.read_sql_query(QUERY1,conn)  
df.head()  
df.plot(kind='hist', figsize=(10, 8) )  
plt.show()
```

*#Plot a box plot of Age*

```
QUERY2 = """  
SELECT Age  
FROM master  
"""  
df = pd.read_sql_query(QUERY2,conn)  
df.head()  
df.plot(kind='box', figsize=(10, 8) )  
plt.show()
